

Bathroom planning data

Verified bathroom planning data for professional use via bathroom planning software is made available by ARGE exclusively. We have more than 30 years of experience in computer bathroom planning and we are committed to marketing to craftsmen's businesses and planners.

Additionally, the ARGE Planning Software Working Group, which consists of industry members, works on the continuous further development of the topic, especially on the data model that forms the basis of the planning activities.

We support you as a member of the industry

- in creating professional data and distributing it to more than 20,000 licences
- in checking data: automated plausibility checks incl. testing tool and security checks by ARGE
- in giving information to your market partners
- in providing support for planners
- in choosing data service providers

The planners receive the data via your planning software automatically. All data is verified by ARGE beforehand.

Our partners

High-quality and verified bathroom planning data requires powerful software. ARGE cooperates with six software partners, using the data model practically and providing regular updates for new user requirements. Around 20,000 craftsmen's businesses, wholesalers, planners, and architects are currently creating their plans with a software solution from our partners.

ARGE Online Viewer

The ARGE Online Viewer for bathroom planning data gives users the opportunity to research products of brand manufacturers. The Online Viewer enables a preview and a configuration of the products in 3-D. The generated 3-D images give you a quick and easy overview of manufacturer-specific product properties and the data to be planned.
